ABOUT ME

A passionate front-end web developer with 4 years of experience, skilled in transforming design ideas into code using CSS, JavaScript, React JS, and Angular. I have also worked on backend development, creating APIs using Java and NodeJS Express. While I know Python, my backend experience focuses on these technologies. Dedicated to continuous learning, I am eager to expand my skills to become a full stack developer and contribute to company growth.

EDUCATION

Virtual University   **Karachi, Pakistan**
Bachelor of Business & Information Technology (Undergraduate)   *Nov 21 - Present*
- **Computational Coursework**: Object-Oriented Programming, Databases, Data Structures.

Korean Computer Academy   **Karachi, Pakistan**
DIT (Diploma Information Technology)   *Nov 21 - Present*
- **Computational Coursework**: HTML, CSS, JavaScript, jQuery, SEO, Bootstrap, WordPress

WORK EXPERIENCE

7nsoft Systems (Mlogica)   **Karachi, Pakistan**
Frontend Developer   *Mar 2021 – Present*
- I had the opportunity to work on the **CAPM CEA** Project a crypto analysis web application built on the latest Angular version. I used Vis.js 2D graphs to detect BTC transactions, visualizing data as nodes and vertices. The UI was developed with Angular Material, and I implemented reactive forms for validations. I also created tables with the functionality to export data in CSV, JSON, and XLSX formats. We are now building similar features for Ethereum transactions. The backend was developed using Java Spring Boot by the backend team, and I integrated these APIs into the Angular frontends.
- I had the opportunity to work on the **AutoML** project, where the system processes user data and runs algorithms to generate ROC results. I handled the frontend using ReactJS and Bootstrap, creating reusable components, implementing APIs, and developing reactive forms with validations.
- I had the opportunity to work on the **7nsoft systems website** using ReactJS, NodeJS, and ExpressJS, creating key pages like home, about, career, and events. I also built an admin panel for posting jobs and events, using MySQL as the database. I validated the forms within the admin panel and used Context API for token authentication and verification.

Cre8ive Bench   **Karachi, Pakistan**
Frontend Developer (Intern)   *Feb 2020 – Mar 2020*
- Worked at a web development agency where I developed client websites focused on product coupons.
- Created a custom boilerplate using Gulp.js, HTML, SCSS, JavaScript, and jQuery.

TECHNICAL SKILLS

- **Programming Languages**: JavaScript, TypeScript, Python, HTML/CSS, SQL
- **Libraries & Frameworks**: React JS, Redux Toolkit, Context API, Tailwind CSS, Angular, Bootstrap, Angular Material, Vercel, React Native, NodeJS ExpressJS, JWT, MongoDB, PGSQL, Django
- **Developer Tools:** VSCode, Git, GitHub, Postman, Bitbucket, Jira

PROJECTS

- 7nsoft Website
- JasmyTrip
- MERN Portfolio

Certifications

- [Programming With JavaScript](#)
- [Introduction to Mobile App Development](#)
- [React Native](#)
